

**a competitor
(fixed vocabulary)**

semantic net
C1-L5, ribs 1-12

L5 is the last name it has: an L6 becomes L5,
a lumbar rib becomes rib 12, the count is silent

**our merged baseline
(May 2026)**

CT

semantic net
L1-L4, last lumbar, sacrum

never shifts a level, by construction, but cannot
say whether the bottom body is L5, L6 or S1

**ours: one-shot identity
+ sequence decoder**

semantic net, 22 classes
T10-T13, L1-L6, sacrum,
ribs 1-11 | 12 | 13 | lumbar rib,
hips, femur

softmax

instances and
type posteriors
thoracic / lumbar / sacral
+ rib contact

monotone decode:
posterior over the count,
readings A / B / C,
double shift reported

sampler: half of every queue from the 39 variant carriers; the patch is forced onto L6 or the lumbar rib

names come from local appearance (T12 vs L1: AUC 0.99 on shape alone); only the count is inferred, with a probability
